

Design Doc

Project Description:

Savery is a web-based application that helps college students discover affordable recipes, save their favorites, and create budget-friendly meal plans. Many students struggle to balance nutrition, time, and grocery expenses while living on a limited budget. Savery provides a centralized platform where users can browse recipes, organize meals for the week, and discover dishes from different cultures.

The following features will be available to users:

Create:

- Users can create and submit their own recipes.
- Users can create personalized weekly meal plans.

Read:

- Users can browse and search recipes.
- Users can filter recipes by cuisine, cost, preparation time, and protein content.
- Users can view public meal plans and saved recipes.

Update:

- Users can edit recipes they have created.
- Users can update meal plans throughout the week.

Delete:

- Users can delete recipes they have created.
- Users can remove recipes from meal plans or

User Personas:

Frugal Student

Goal:

Eat healthy meals while staying within a limited grocery budget.

Needs:

A way to find affordable recipes, estimate meal costs, and organize meals for the week without spending excessive time planning.

Fitness Focused Student

Goal:

Meet nutrition and protein goals while balancing classes and extracurricular activities.

Needs:

A way to find recipes with high protein content and organize meals that support fitness goals.

Foodie

Goal:

Discover recipes from different cultures and expand cooking skills.

Needs:

A way to browse recipes by cuisine, learn about dishes from different cultural backgrounds, and save recipes to try later.

User Stories:

Browse and Filter Recipes

As a budget-conscious student, I want to filter recipes by estimated cost so that I can find meals that fit my weekly budget.

As a fitness-focused student, I want to filter recipes by protein/ingredient content so that I can quickly find meals that support my nutritional goals.

As a foodie, I want to browse recipes by cuisine so that I can discover dishes from different cultures.

Create and Save Recipes

As a foodie, I want to upload a family recipe so that I can share a dish that is meaningful to me.

As a student, I want to save my favorite recipes so that I can easily access them in the future.

Create and Manage Meal Plans

As a budget-conscious student, I want to create a weekly meal plan so that I can organize my grocery shopping and reduce food waste.

As a fitness-focused student, I want to update my meal plan throughout the week so that I can adjust it based on my schedule and goals.

Work Division:

Melissa:

- Create sample recipe data
- Build Express routes for recipe CRUD operations.
- Create Recipe Discovery Page
 - Display recipes from MongoDB.
 - Allow users to search and filter recipes by cost, cuisine, preparation time, and protein content.
 - Add frontend functionality for editing and deleting recipes.
 - Create “saved” button where users can save recipies
- Create Recipe Creation Form
 - Create a form that allows users to submit new recipes.
 - Validate required fields such as recipe name, ingredients, instructions, cost, and preparation time.
 - Send form data from the frontend to the Express backend.

James:

- Create sample meal plan data
- Build Express routes for meal plan CRUD operations.
- Meal Planner Page
 - Allow users to create weekly meal plans using recipes from the database.
 - Display selected recipes in a meal plan.
 - Show estimated total cost for the meal plan.
 - Allow users to update or delete meal plans.
- Create Saved Recipies page
 - Create “saved” page where users can go to see their previously saved recipies
 - Users should be able to unsave recipes
